

# Instrument Reprocessing

The training covers the various stages of instrument reprocessing, from cleaning and disinfecting instruments to packaging and sterilization of them. The training equips participants with the skills to carry out high-quality instrument reprocessing. The goal of the training is to increase understanding of the importance of instrument reprocessing and to guide the correct implementation of instrument reprocessing. The training includes current information on the role of instrument reprocessing in infection prevention. During the training the participants will become familiar with aseptic working methods, standard precautions, as well as the cleaning and disinfecting, packaging, and sterilization of instruments.

## Who is the training suitable for?

The training is suitable for individuals who work in instrument reprocessing tasks.

## Content of the training

The training includes the following modules, customized according to the client's wishes:

- Aseptic work methods
- Cleaning and disinfection of reusable medical devices
- Packaging
- Sterilization

## Implementation

The training is conducted as webinars.

The scope of the training is tailored according to the client's wishes.

The number of participants is determined by agreement.
